DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 rejected under 35 U.S.C. 103(a) as being unpatentable over Inada et al. (U.S. 5,608,559) in further view of Oh et al. (U.S. 6,061,246). Inada et al. discloses a liquid crystal display with several flexible wiring boards for connecting signals from an external control circuit to the driver IC's. Note in figure 5, the flexible wiring boards 33 and 34 and driver IC's 24 and 25. It is inherent that the display contains a control circuit as it would not function otherwise. Although Inada et al. does not show the narrow tabs extending from the main body of the wiring board to the lcd panel, Oh et al. discloses a microelectric package with flexible extensions. Note in figures 2 and 3, the flexible layer 122 with flexible extensions 140, output lines 141, and input lines 123. Each extension carries the wiring for a corresponding IC. Although the extensions carry output wiring, it would have been obvious to those of ordinary skill in the art to modify the wiring board of Inada et al. to contain tabs extending from the main body to the lcd panel based on the teaching of Oh et al. as evidenced by the prior art disclosure of Takahashi et al. (U.S. 6,266,119). See figure 3.
